

RESERVE™

KEEPS WINE FRESH

ReServe™ lets you manage the business of wine tasting and serving

ReServe™ has a choice of three types of individual bottle closures; wine, champagne and dessert wine bottles. The system preserves the wine using a hand held argon gas regulator, that connects to the closure and inserts argon gas displacing the oxygen. Inert argon gas is the perfect gas for wine preservation.

A little gas is good for business!

ReServe™ is the versatile wine preservation system for Cellar doors, restaurants, and home. It's light weight, compact and totally portable.

One argon gas regulator can preserve any number of bottles, including, champagne, white, red and dessert wines.

Reserve™ is practical and allows wine to be poured from the bottle in the tasting room or at the table in restaurants.

So your customers still experience both the personal attention and quality wine that's good for business, and you reduce spoilage and lost profit.

Now you can better manage the business of wine tasting and serving, using the versatile ReServe™ wine preservation system.

RESERVE™

RESERVE™ - MODULAR COMPONENTS

Adaptor heads:

- Standard Bottle
- Narrow Bottle
- Champagne Bottle

Gas Regulator:

Gas canister insets into regulator

Argon gas canisters:

10 bottles per box

Operation

The adaptor head, forms an airtight seal around the bottle neck. The regulator is then attached to the adaptor head and argon gas is inserted displacing the air to prevent oxidization. Each gas canisters last approximately 20 uses.

Preservation

Sommelier tests of over 60 varieties of red and white wines, showed that the wine maintained freshness for up to six days using the ReServe preservation system.

Reliable and easy to use

ReServe is reliable and easy to use. The one regulator services multiple adaptors to preserve as many bottles as required.

Modular system

All items can be purchased separately to suit your needs.
